

Two post-doctoral positions are available at the University of California, Riverside to work with a research team led by Dr. Weiwei Zhang (<http://memory.ucr.edu>). The postdoc will work on a NIMH-funded project on the neural and cognitive mechanisms for mnemonic precision using psychophysics, cognitive modeling, eye tracking, ERP, non-invasive brain stimulation, and neuroimaging methods in healthy and clinical populations. We are seeking individuals with a strong background in fMRI and interests in attention and memory research. Good quantitative and programming skills are essential as well. Experience with eye tracking and ERPs is preferred, but not required.
