

## **Post-doctoral positions in the Laboratory of Social & Affective Neuroscience at Georgetown University**

The Laboratory on Social and Affective Neuroscience in the Department of Psychology at Georgetown University in Washington, DC (**PI: Abigail Marsh**) is looking to hire 1-2 post-doctoral researchers to conduct fMRI, behavioral, and neurohormonal research related to the neural basis of empathy, altruism, and interpersonal callousness/psychopathy.

The project offers opportunities to develop skills and expertise in functional and structural neuroimaging combined with neurohormonal research, and to work in a collaborative and supportive social neuroscience lab.

The start date is flexible. Interviews will be conducted until the position is filled.

The ideal candidate will have...

- A PhD in psychology, neuroscience, cognitive science, or a closely related field
- Interest and experience in conducting empirical research on empathy, altruism, aggression, and/or psychopathy
- Experience conducting computational analyses of behavioral and/or neuroimaging data
- A publication record commensurate with the candidate's level of training
- Enthusiasm for working as part of a team and taking part in training junior scholars

To learn more about our lab, please visit [www.abigailmarsh.com](http://www.abigailmarsh.com)

We will continue to interview candidates until 1 or 2 positions have been filled.

Please submit inquiries or applications (a cover letter and CV that includes contact information for at least 3 references) can be sent to [lsan@georgetown.edu](mailto:lsan@georgetown.edu).
